James Andrew

DIGITAL DESIGNER & WEB DEVELOPER

About

I graduated from Curtin University with a Bachelor of Design, where I started with UX/UI design and was drawn towards web development. Recently, I've been focusing on honing my developer skills through a full-stack React Native project and a frontend development training program with the German company, Kreativstorm.

Current Position

Currently, I'm working at Rio Tinto as IT support to assist in their Rail Refresh project, where the new desks for their automated rail operation are being built. I'm actively seeking a position within web development.

Experience

At Curtin University, I followed a comprehensive and structured design process, covering research, ideation, refinement, prototyping, user testing, and full-stack development. This provided me with a well-rounded understanding of every aspect of website and mobile app creation. I thrived in collaborative group projects, working alongside designers and fellow developers. Notably, I often assumed leadership roles, such as in the creation of the Grad Show 2022 website and my recent frontend development training program with Kreativstorm.

Technical Skills

Over the past three years, I've been focusing on web development. I started with a solid foundation in HTML, CSS, JavaScript, and Node.js. Since then, I've consistently expanded my skill set, incorporating tools such as Lit-Element, Sass, Express, MongoDB, Firebase, and Next.js. Additionally, I've leveraged Solid.js and TypeScript to create my personal portfolio website, a showcase for the projects completed during my university course. Proficient in managing version control, I've overseen and supported group members through Github.

Notable Projects

Two standout projects on my website that highlight my full-stack development expertise are BiblioFIle and Exhibition Space. In Exhibition Space, I handled data from backend database, demonstrating my proficiency in both frontend technologies and collaboration with backend team members. For BiblioFile, I assumed the developer role, working closely with a designer and UX/UI researcher to successfully deliver a full-stack website which was coded solely by me.

Check out my website.
